# Bring Your Community to Your Desktop

*"Today's busy society does not have the luxury of sitting on the front porch to talk with passing neighbors anymore. Now we have a new way..."*

## Digital Front Porch

A Service of Houston PC Pro

# What is DFP?

Digital Front Porch (DFP) is a website solution designed by the good people at Houston PC Pro (HPC). The DFP package gives you a powerful website custom-tailored for neighborhood use, but without all the technical headaches. DFP has proven itself to be an effective communication tool for neighbors and homeowner associations, as well as a window for the rest of the world.

No technical skills or coding knowledge is required to use DFP. Our expert staff will work with you personally to get you set up and running your own full-blown website. All you have to do is answer some basic questions of what you want. We take care of everything from registering your domain to training you and your website staff. It's the most personal service on the Internet, at a price that's lower than what most design firms charge for setup alone.

## DFP Is Ideal for Homeowner Associations.

- Content Management System allows you to update pages on the site itself — no need to FTP files or 'contribute' through clumsy software.
- Secure membership system provides everything you need to keep your content safe and available only to registered members.
- Documents can be made available for downloading, either public or secured.
- Contact section can provide easy communications with your management company or various groups, communities or individuals within your association.
- Private messaging makes it easy to communicate with other members.

Our websites are easily adaptable for use by apartment communities, civic groups, religious groups, churches, school or any group that might need a communication hub. If you have used a Yahoo group for your communications needs but feel limited, Digital Front Porch is the logical next step in your group's needs.

## Fast & Easy Setup

Perhaps the most attractive aspect of DFP for our clients is the ease of setup. We take care of all technology-related steps, including securing a domain name if needed. We have our own private servers maintained by one of the top-rated hosting specialists in the USA, and our clients enjoy a fast, secure, and reliable environment without any headaches or worries.

We can copy an existing site so your neighbors can enjoy the added features and benefits, or we are happy to create something from scratch for you. An initial meeting will provide an opportunity to discuss this as well as decide on a color scheme, graphics package, and content for the new site, not to mention a 'Go Live' date.

From there we will create your framework, setup hosting, email, domain configuration, and everything else associated with the site. We will then provide access so you can look at the progress and give some feedback.

The entire process can take from a week to a month, the average being two weeks. This depends on several factors, primarily the amount of content and the number and type of special requests you may have.

# DFP Standard Features

- CMS – Content Management System
- Password-Protected Area
- Message Board for Residents
- Private Messaging
- Opinion Polls
- Download Files
- Upload Files
- Resident E-mail Broadcast Utilities
- E-mail
- Daily Digest – Calendar/Message Board
- Image Management
- Statistics/Webpage Reporting
- FTP Account

Using DFP is very simple. If you have used MS Word and have browsed the Internet, then you can easily administer your new website. In fact, 95% of all DFP sites are maintained by people who have never even considered creating a website, much less 'webmastering' one. Most are volunteer residents or 'volunteered' board members, and full support, training, and advice are included for the lifetime of using DFP.
